Economic overview

If is the leading property and casualty insurance company in the Nordic region, with insurance operations that also encompass the Baltic countries. The Group's headquarters is located in Solna, Sweden and the Parent Company of the If Group, If P&C Insurance Holding Ltd (publ), is a wholly owned subsidiary of Sampo plc, a Finnish listed company. If's subsidiaries and branches provide insurance solutions and services in Sweden, Norway, Denmark, Finland and the Baltic countries. If's insurance operations are divided into four business areas: Private, Commercial, Industrial and Baltic.

The totals in tables and statements in the interim report may not always reconcile due to rounding. The aim is for each line item to correspond to the source and therefore rounding differences may arise in totals. Comparative figures for income statement items refer to the period January-June 2025 and for balance sheet items as per 31 December 2025.

Earnings and financial position

Result

Insurance service result increased to MSEK 7,299 (6,846), and the combined ratio improved and amounted to 81.9 (82.3). Net financial result was MSEK 1,973 (2,876). Profit before tax for the period amounted to MSEK 8,449 (8,807).

Premiums

Insurance revenue amounted to MSEK 43,287 (42,082) whereof gross written premium amounted to MSEK 53,254 (53,180). Gross written premium growth was 2.9%. The growth was robust for business area Private and Commercial while Industrial and Baltic were slightly negative. The growth was mainly driven by continued strong retention, positive customer count development and premium increases.

Claims

Insurance service expenses, claims incurred and reinsurers' share of claims incurred increased to a net of MSEK 26,402 (25,589) during the period. The risk ratio improved slightly to 59.5% (59.6), including a 1.9 percentage points (1.0) positive impact of prior years' development. The period showed favourable large claims outcome, with weather-related claims broadly in line with expectations despite a major storm.

On 30 June the liability for incurred claims amounted to MSEK 90,294 (84,972). Adjusted for currency effects, the liability for incurred claims increased by MSEK 2,785 compared to the end of 2025.

The reinsurance asset for incurred claims amounted to MSEK 6,340 (6,568). Adjusted for currency effects and other items that did not impact the income statement, the decrease during the period was MSEK 447.

Expenses

Insurance service expenses, operating expenses amounted to MSEK 6,675 (6,223) during the first half of the year. The cost ratio improved to 22.5% (22.7).

During the first half of the year, the restructuring reserve was released by MSEK 172 (200), which was utilised against incurred expenses.

Net financial result

Net financial result was MSEK 1,973 (2,876) and consists of Investment result and Insurance finance income or expenses, net.

The investment result was MSEK 3,238 (3,558). The result corresponds to a total investment return of 2.2% (2.5), driven mainly by a strong second quarter for both the equity investments and the fixed income portfolio. The allocation of the investment assets has remained stable, fixed income comprises 89% (88) and equities 11% (12) of the total investment assets. The duration of the fixed income assets has gradually increased and was 3.1 years (2.6) at the end of the period.

Insurance finance income or expenses, net was MSEK -1,265 (-682) and included the effect of changes in discount rates of MSEK -21 (585) and interest expense (unwinding) of MSEK -1,249 (-1,071).

Solvency, cash flow and financing

Insurance is a regulated business subject to EU-wide rules for calculating capital requirements and available capital. All If's insurance subsidiaries have regulatory solvency capital requirements (SCR) and fulfilled those during the reporting period. If P&C Insurance Ltd (publ) applies the Sampo Group partial internal model to calculate the regulatory solvency capital requirement, where the majority of the insurance risks are calculated using the Sampo Group partial internal model while other risks are calculated using the standard formula according to Solvency II. During the period, approval was obtained from the Swedish Financial Supervisory Authority to include the merged business from Topdanmark in the Sampo Group partial internal model. If Livförsäkring AB, If P&C Insurance AS, and Forsikringsselskabet Dansk Sundhedssikring A/S use only the standard formula to calculate the SCR. As a subsidiary of Sampo plc, If P&C Insurance Holding Ltd (publ) is a member of the Sampo insurance group and is not subject to a formal requirement to report its subgroup solvency position.

Cash flow from operating activities, including net investments in financial investment assets, has decreased to MSEK 11,779 (15,971) despite lower claims payments as the net investments have increased. At the Annual General Meeting a dividend of MSEK 5,400 (11,000) was paid and in addition an extra dividend of MSEK 2,800 (-) was paid in the period. The subordinated loan was repaid of net MSEK 1,500 (238).

Significant events and effects during the reporting period

In April, the Danish Supreme Court ruled that the compensation threshold for permanent loss of earning capacity in workers' compensation cases will be retrospectively lowered from 15% to 5%. The ruling may lead to additional claims and financial consequences for the Danish insurance industry, although the full impact remains uncertain. The potential impact is expected to be covered by existing reserves.

Significant events and effects after the reporting period

No significant events have occurred after the reporting period.

Parent Company earnings

The operations of the Parent Company If P&C Insurance Holding Ltd (publ) consist primarily of ownership and management of shares in subsidiaries. Parts of the cash surplus are also managed in a dedicated investment portfolio. Profit for the period was MSEK 9,457 (12,336), primarily due to dividends from subsidiaries.

NOTE 1 – Accounting policies

For the Group, this Interim report was prepared in accordance with IAS 34 Interim Financial Reporting and applicable regulations in the Annual Accounts Act (1995:1560) for Insurance Companies (ÅRFL), and for the Parent Company in accordance with the Annual Accounts Act (1995:1554) (ÅRL). The accounting policies for the Group and the Parent Company that have been applied in this Interim report are the same as those applied in the 2025 Annual Report.

Besides the disclosures provided in Notes 1-5 more information can be found in the section Economic overview.

As commented on in the 2025 Annual report, the Group will in 2027 for the first time apply IFRS 18 Presentation and Disclosure in Financial Statements. The Group primarily has insurance operations and has therefore been considered to have a main business activity of investing in assets. Income and expenses that otherwise would have been classified in the investing category will be presented in the operating category. There is no expected impact on the insurance service result, net profit for the year or equity.

As a consequence of the changed requirements for aggregation and disaggregation, some changes to the presentation in the primary financial statements as well as the note disclosures are expected. Current assessment is that there are no management-defined performance measures for the Group

NOTE 2 – Risks and uncertainties

Risks and risk management are a natural and integrated part of If's operations and external environment. An effective risk management process is a prerequisite for running the business efficiently and achieving established goals. If’s primary risk categories are underwriting risk, market risk, credit risk, operational risk, and other risks which include sustainability risks. The main underwriting risks in the insurance business are premium and reserve risks, while the main market risks are interest rate risk, equity risk and currency risk.

If has a risk framework in place to manage its risks in line with overall risk management objectives and strategy. If bases its risk framework on regulation and best practices and applies the three lines model in its daily risk management activities. The objective of risk management is to provide assurance to the boards and other stakeholders that risks and capital are being managed appropriately.

If’s risks and risk management are further described in the 2025 Annual Report.

NOTE 3 – Result per business area

Income statement and balance sheet per business area

NOTE 4 – Other financial investment assets and derivative liabilities

Classification of other financial investment assets and derivative liabilities

The measurement and reporting of financial assets and liabilities depends on their classification.

	Acquisition value		Fair value		Carrying amount	
MSEK	2026 30 Jun	2025 31 Dec	2026 30 Jun	2025 31 Dec	2026 30 Jun	2025 31 Dec
Financial assets at fair value through profit or loss (mandatorily)						
Shares and participations	9,243	8,937	17,067	15,996	17,067	15,996
Bonds and other interest-bearing securities	127,903	120,174	128,390	120,865	128,390	120,865
Derivatives	82	122	430	251	430	251
Total financial assets at fair value through profit or loss	**137,229**	**129,233**	**145,887**	**137,112**	**145,887**	**137,112**
Financial assets measured at amortised cost[1)]						
Other loans	374	372	358	356	358	356
Total other financial investment assets	**137,603**	**129,605**	**146,245**	**137,469**	**146,245**	**137,469**
Financial liabilities at fair value through profit or loss (mandatorily)						
Derivatives	293	472	732	799	732	799
Total financial liabilities at fair value through profit or loss	**293**	**472**	**732**	**799**	**732**	**799**

[1)] Other loans are in accordance with If's application of IFRS 9 accounted for at amortised cost. The fair value is only shown for disclosure purposes. Financial instruments with fair value information are classified in three different hierarchy levels depending on their liquidity and valuation methods. All loans are classified in level 3 and the fair value of these loans is based on cash-flow valuations.

Financial investment assets and derivative liabilities measured at fair value

Within If, a thorough process is followed and controls are performed in order to determine fair values of financial assets and liabilities in accordance with applicable regulations. For example, controls are made against several different external sources and assessments of abnormal price changes are performed when necessary.

Different valuation methods are used to determine the fair value depending on the type of financial instruments and to what extent they are traded on active markets. In order to evaluate the activity in a market with respect to frequency and volume, If mainly uses information compiled by Bloomberg. Quoted shares are measured on the basis of latest trade prices on stock markets and are obtained from Bloomberg. The valuation of bonds is also usually based on prices from Bloomberg, where the last bid prices are used for quoted bonds. For model-valued interest bearing instruments, yield curves based on last mid prices are used.

If's financial instruments, which are measured at fair value, are categorised in three hierarchy levels depending on their valuation methods, as well as how active the market is and available observable or unobservable inputs. The classification in hierarchy levels is reviewed quarterly. If conditions have changed for the existing level, the holding in question is moved to the correct hierarchy level.

Level 1 – Financial assets and liabilities with valuation based on quoted prices in active markets for identical assets or liabilities.

Quoted prices in active markets are considered the best estimate of an asset/liability's fair value. An active market is typically characterised by quoted prices that are easily available and that represent actual and regularly occurring transactions at arm's length.

Assets and liabilities in the category include shares, listed funds (ETF), equity and interest rate funds and interest bearing assets that have quoted prices in an active market at the time of valuation.

Level 2 – Financial assets and liabilities with valuation based on quoted prices or valuation based on directly or indirectly observable market data.

In the level 2 hierarchy, all essential inputs are observable either directly or indirectly. The large majority of the instruments in level 2 are traded in a market with daily quoted prices and regularly occurring market transactions but where the market is not considered to be active enough regarding frequency and volume and/ or when the standard deviation of the prices is high. A very limited part of the instruments is model-valued with the help of market data that is indirectly observable, meaning that prices can be derived from observable markets where market interest rates and underlying prices are normally updated daily or, in exceptional cases, at least monthly.

Instruments that are measured at level 2 include interest-bearing assets where the market is not active enough. Most OTC derivatives, standardised derivatives and currency derivatives are also included in this level.

Level 3 – Financial assets and liabilities with valuation based on unobservable inputs for the asset or liability.

When neither quoted prices in active markets nor observable market data is available, the fair value of financial instruments is calculated using valuation techniques that are based on non-observable market data.

Level 3 comprises private equity, unlisted shares and distressed assets encountering financial difficulties where trading has essentially ceased to exist.

The types of financial instruments classified as level 3 in the valuation hierarchy are discussed below with reference to type of securities and valuation method:

- Private equity is classified as level 3. The majority of If's investments in private equity is made in mutual funds. The fair values are based on prices and share values obtained from the funds' administrators. These quotations are based on the value of the underlying assets in accordance with market practice. The last obtained value is used.
- For some unlisted shares external evaluations are obtained and used for valuation. The external valuations are based on models that contain non-observable assumptions.
- Other assets in level 3 are normally measured at least yearly and the valuation is based either on external estimates, cash flow analyses or latest market transactions.

Financial investment assets and derivative liabilities in fair value hierarchy

MSEK	2026 30 Jun Level 1	Level 2	Level 3	Total fair value	2025 31 Dec Level 1	Level 2	Level 3	Total fair value

Sensitivity analysis of the fair values of financial investment assets in level 3

The sensitivity of the fair value of level 3 instruments to changes in key assumptions, by category and financial instrument is shown below.

The following changes in key assumptions have been used:

– 1% increase in the yield curve for bonds and other interest-bearing securities; and

– 20% decrease in prices for equity related securities.

MSEK	2026 30 Jun Carrying amount	Effect of reasonably possible alternative assumptions	2025 31 Dec Carrying amount	Effect of reasonably possible alternative assumptions

Definitions

Alternative performance measures
A performance measure which is not defined in applicable accounting standards (IFRS, ÅRFL, FFFS 2019:23 and FRL), but where If considers it relevant to monitor and describe the Group's financial situation and to provide additional useful information to the users of its financial statements. Since these measures have been developed and adapted for If, they are not fully comparable with similar performance measures presented by other companies. These are marked below with *).

Claims ratio
Total sum of insurance service expenses, claims incurred including claims handling expenses and reinsurers' share of incurred claims in relation to the sum of insurance revenue and reinsurance premium expenses, expressed as a percentage.

Combined ratio
Total sum of insurance service expenses (claims incurred and operating expenses) and reinsurers' share of claims incurred in relation to the sum of insurance revenue and reinsurance premium expenses, expressed as a percentage.

Consolidation capital
Shareholders' equity less deferred tax assets plus untaxed reserves, subordinated debt and deferred tax liability.

Consolidation margin
Key ratio representing the relative size of the consolidation capital. The consolidation margin is calculated as the consolidation capital in relation to premiums written, net of reinsurance, excluding portfolio premiums.

Cost ratio *)
Total sum of insurance service expenses, operating expenses and claims handling expenses in relation to the sum of insurance revenue and reinsurance premium expenses, expressed as a percentage.

Expense ratio
Insurance service expenses, operating expenses in relation to the sum of insurance revenue and reinsurance premium expenses, expressed as a percentage.

Gross written premium *)
Gross written premium refers to the compensation that If receives from the policyholder in return for the transfer of risk. Gross written premium is the contractually determined premium (for the entire coverage period) for insurance contracts where risk coverage began during the period, subsequently adjusted for any expected losses and write-offs.

Gross written premium growth *)
Change in gross written premium adjusted for currency effects and excluding any adjustments for the expected losses and write-offs, expressed as a percentage.

Insurance margin *)
Insurance service result in relation to the sum of insurance revenue and reinsurance premium expenses, expressed as a percentage.

Risk ratio *)
Total sum of insurance service expenses, claims incurred excluding claims handling expenses and reinsurers' share of incurred claims, in relation to the sum of insurance revenue and reinsurance premium expenses, expressed as a percentage.

Total investment return
Total return in relation to other financial investment assets, land and buildings, cash and bank balances, accrued financial income, securities settlement claims/liabilities and derivative liabilities, expressed as a percentage. The return has been calculated using a daily time-weighted return calculation method.

Total return
Net of the following income and expenses: interest income/expense, dividend on shares and participations, surplus/deficits from land and buildings, management costs, realised and unrealised changes in fair value of real estate, shares and participations and interest-bearing securities, and currency gains/losses. Return pertaining to associates is not included.
